

- 1 Apply rubber glue on top of an old CD.

- 2 Stick the printout of a paper protractor on this CD. The protractor will indicate angles from 0 to 360-degrees.

- 3 Apply glue on a thick cardboard and stick the CD protractor on it.

- 4 Cut points in two short straws. Pivot them in the center of the protractor with a paper pin. Use these straw pointers to measure angles.
